

WE MADE HISTORY
the Agricultural Drainage and Environment
Conference was a big success!

History was made on November 6th, 2019 at the Agricultural Drainage and the Environment Conference in Regina. Over 150 people came together to bring a balanced conversation that will bring success to our farmers and protection to

our environment.

We learned about the research done by the Lower Qu'Appelle Watershed Stewards and the Global Institute of Water Security at the U of S that a significant amount of nutrient loading is coming from the agricultural land use.

Here is what the media had to say about the conference:

Many at the conference asked - what is next? This conference showed that we do care and will not let this science sit on the shelf and collect dust. The conversation has started - please continue by **emailing Premier Scott Moe** at premier@gov.sk.ca and ask how his government plans to stop the water conflict and move to collaboration by regulating illegal drainage and protect our water resources.

CLEM is working with the Last Mountain Lake Stewardship Group to ensure the health of our lakes in southern Saskatchewan.
